# **Engaging Science Education for Teens**

by Wandile Ndaba (8 Mar 21)

# Week 2 - UI Design and Prototyping Report

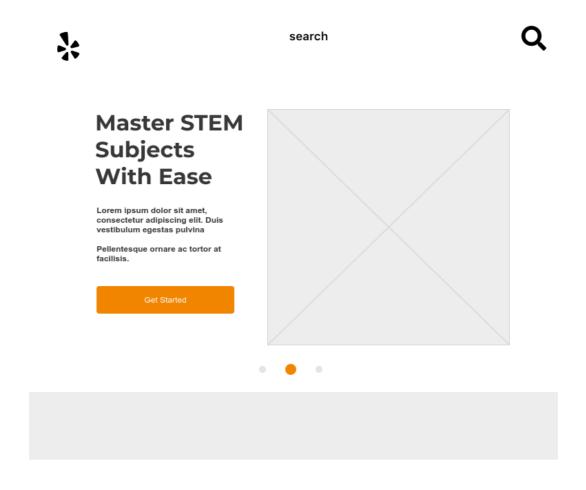

#### 1. Introduction

- The goal of this project is to create a **website** that teaches **STEM** (*Science*, *Technology*, *Engineering*, *Mathematics*) material to teenage students.
- It will be narrative-driven, highly visual and applying best practices and science-informed teaching strategies. It will implement an audio voice-over that students can activate whenever they get stuck on a topic.
- It will include many features to aid student's learning, including: 1. an audio player on the page that's accessible at all times; 2. a progress bar; 3. a mobile-responsive design; 4. a flashcard app.

# 2. User Interface Design and Prototype

To help flesh out the visual idea and communicate it better to others, I
drafted/prototyped two pages from the website - the homepage and a
single lesson page.

## 2.1.1. Homepage Mockup

#### Go Further That You Thought Possible

## 2.1.2. Single Lesson Page Mockup

The goal for the user experience and interface is to achieve an inviting,
 light-hearted and fun learning environment.

The website is not meant to feel too much like a typical online classroom, but more like a series

of in-depth articles about complex ideas, tackled with the help of an expert voice-over guide - accessed through the audio player.

- This being the case, all of the website elements/features must be designed and implemented with this philosophy in mind and avoid falling into conventions that will make it too clunky.
  - 1. **Audio player**: Has been designed to sit on the left of the screen and be unobtrusive.
    - 2. **Progress bar**: Has been designed to always be visible on the top of the page.
    - 3. **Responsive design**: All elements except the course content will be designed to become hidden on mobile devices, once the the lesson starts.
    - 4. **Flashcard app**: Will be designed to appear on the lesson completion screen.

# 3. Navigation Structure

## 3.1. Navigation Structure Overview

Because this website is a learning environment, it will be important to provide an <u>intuitive</u> way of finding their way around it. Less time for searching means more time spent learning.

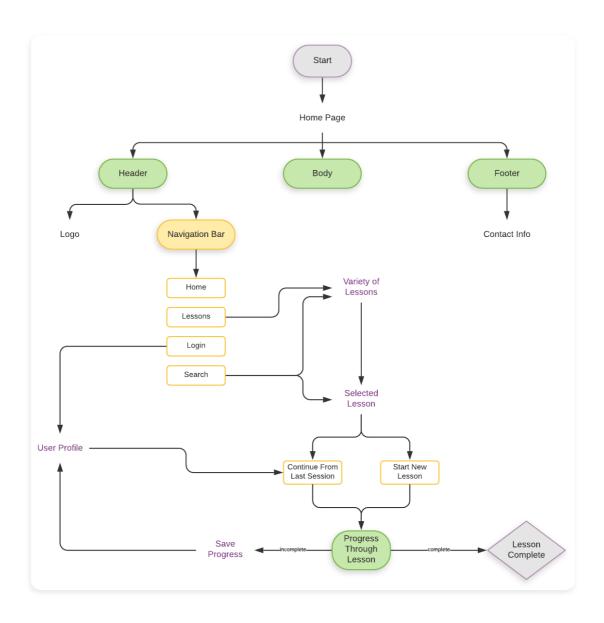

It is well known that websites are not merely a separate artifact, removed from the rest of the organisation and it's goals. A successful website aligns with, and meets your organisation's strategic objectives while satisfying the needs of the user.

This fact, the need to balance these goals, is what calls for devising a consistent UI and experience.

The main driving force for the organising of information on the website will be the specific lesson that a student is currently doing.

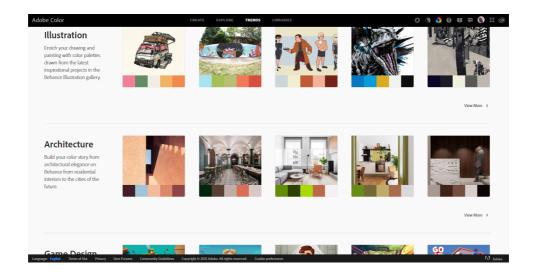

## 3.2. Typical User Flow

User experience journey for completing a lesson
